Analysis	Assessment & Design	Preparation & Pilot	Migration / Execution	Onboarding & Maintenace

1. Advisory & Analysis

Our team of experts will carefully assess your business requirements and analyze the necessary data to develop an effective IT strategy. We will thoroughly evaluate your existing infrastructure to identify the components that form your production environment.

2. Assessment & Design

From our initial analysis, we'll identify and fill gaps in your governance. Conduct an assessment of your current IT infrastructure, applications, and data to understand the scope of the migration project. From the assessment, we'll design the cloud architecture that aligns with your business needs.

3. Preparation and Pilot

To ensure a smooth migration and execution, we'll test an end-to-end migration in your production environment to identify areas where performance enhancements can be made.

4. Migration / Execution

Once optimization is done, we'll run full and incremental migrations from source to destination, and provide status reports to stakeholders and business users.
5. Onboarding & Maintenance

After the migration, we'll continue to provide ongoing management, monitoring, and support for your cloud infrastructure, providing an SLA backed comprehensive service with cost analysis and ongoing optimisation, using the best of Azure / AWS native offerings and solutions.
